

Board of State and Community Corrections
Juvenile Detention Profile Survey
Data Caveats & Limitations

The following caveats and limitations have been identified for the Juvenile Detention Profile Survey data:

- Source data can be queried at <http://app.bscc.ca.gov/joq/jds/QuerySelection.asp>
- We make every effort to verify the submitted data to ensure its accuracy, but it is ultimately up to the jurisdictions (counties) to report reliable data.
- We do not collect details on policies that jurisdictions enforce that might influence these data.
- A number of juvenile facilities have opened and closed from 2002 through 2019. These changes might affect how the data are represented.
 - Mariposa County: Mariposa County operates a Special Purpose Juvenile Hall. A Special Purpose Juvenile Hall is a county facility used for temporary confinement of youth, not to exceed 96 hours, prior to transfer to a full service juvenile facility or release. Facility-level data provided does not provide meaningful trends, thus are excluded from this document.
 - Mono County: Mono County operated a Special Purpose Juvenile Hall between 2002 and March 2014. Facility-level data provided does not provide meaningful trends, thus are excluded from this document.
 - Plumas County: Plumas County operated a Special Purpose Juvenile Hall between 2002 and March 2008. Facility-level data provided does not provide meaningful trends, thus are excluded from this document.
 - Trinity County: Trinity County's Juvenile Hall converted to a Special Purpose Juvenile Hall in August 2014.

2019	3,692	1,566	42%	2,127	58%	3,702	1,017	27%	2,686	73%

Note. Average Daily Population (ADP) is calculated by taking a count of the number of juveniles in custody at 0600 hours each day of the month, adding these daily counts together, and dividing the sum by the number of days in each month. A one-day snapshot is the number of juveniles in custody at 0600 hours on the 15th day of the month. For the misdemeanor and felony populations the one-day snapshot each month provides an estimate of the monthly population and is used to estimate the average monthly population (AMP) for the year.

2019	67	44	65%	24	36%	65	20	31%	45	69%	

Note. Average Daily Population (ADP) is calculated by taking a count of the number of juveniles in custody at 0600 hours each day of the month, adding these daily counts together, and dividing the sum by the number of days in each month. A one-day snapshot is the number of juveniles in custody at 0600 hours on the 15th day of the month. For the misdemeanor and felony populations the one-day snapshot each month provides an estimate of the monthly population and is used to estimate the average monthly population (AMP) for the year.

Note. Average Daily Population (ADP) is calculated by taking a count of the number of juveniles in custody at 0600 hours each day of the month, adding these daily counts together, and dividing the sum by the number of days in each month. A one-day snapshot is the number of juveniles in custody at 0600 hours on the 15th day of the month. For the misdemeanor and felony populations the one-day snapshot each month provides an estimate of the monthly population and is used to estimate the average monthly population (AMP) for the year.

2019				107	100%	124	24	19%	101	81%

Note. Average Daily Population (ADP) is calculated by taking a count of the number of juveniles in custody at 0600 hours each day of the month, adding these daily counts together, and dividing the sum by the number of days in each month. A one-day snapshot is the number of juveniles in custody at 0600 hours on the 15th day of the month. For the misdemeanor and felony populations the one-day snapshot each month provides an estimate of the monthly population and is used to estimate the average monthly population (AMP) for the year.

Note. Inyo's Juvenile Hall converted to a Special Purpose Juvenile Hall in January 2017. A Special Purpose Juvenile Hall is a county facility used for temporary confinement of youth, not to exceed 96 hours, prior to transfer to a full service juvenile facility or release. Average Daily Population (ADP) is calculated by taking a count of the number of juveniles in custody at 0600 hours each day of the month, adding these daily counts together, and dividing the sum by the number of days in each month. A one-day snapshot is the number of juveniles in custody at 0600 hours on the 15th day of the month. For the misdemeanor and felony populations the one-day snapshot each month provides an estimate of the monthly population and is used to estimate the average monthly population (AMP) for the year.

2018	34	18	54%	16	46%	33	3	8%	30	92%
2019	29	15	51%	14	49%	29	4	13%	26	88%

Note. Average Daily Population (ADP) is calculated by taking a count of the number of juveniles in custody at 0600 hours each day of the month, adding these daily counts together, and dividing the sum by the number of days in each month. A one-day snapshot is the number of juveniles in custody at 0600 hours on the 15th day of the month. For the misdemeanor and felony populations the one-day snapshot each month provides an estimate of the monthly population and is used to estimate the average monthly population (AMP) for the year.

2019				272	100%	274	12	4%	262	96%

Note. Average Daily Population (ADP) is calculated by taking a count of the number of juveniles in custody at 0600 hours each day of the month, adding these daily counts together, and dividing the sum by the number of days in each month. A one-day snapshot is the number of juveniles in custody at 0600 hours on the 15th day of the month. For the misdemeanor and felony populations the one-day snapshot each month provides an estimate of the monthly population and is used to estimate the average monthly population (AMP) for the year.

Note. ² 2006 Average Daily Population based on February - December. Average Daily Population (ADP) is calculated by taking a count of the number of juveniles in custody at 0600 hours each day of the month, adding these daily counts together, and dividing the sum by the number of days in each month. A one-day snapshot is the number of juveniles in custody at 0600 hours on the 15th day of the month. For the misdemeanor and felony populations the one-day snapshot each month provides an estimate of the monthly population and is used to estimate the average monthly population (AMP) for the year.

Note. Average Daily Population (ADP) is calculated by taking a count of the number of juveniles in custody at 0600 hours each day of the month, adding these daily counts together, and dividing the sum by the number of days in each month. A one-day snapshot is the number of juveniles in custody at 0600 hours on the 15th day of the month. For the misdemeanor and felony populations the one-day snapshot each month provides an estimate of the monthly population and is used to estimate the average monthly population (AMP) for the year.

Note. Average Daily Population (ADP) is calculated by taking a count of the number of juveniles in custody at 0600 hours each day of the month, adding these daily counts together, and dividing the sum by the number of days in each month. A one-day snapshot is the number of juveniles in custody at 0600 hours on the 15th day of the month. For the misdemeanor and felony populations the one-day snapshot each month provides an estimate of the monthly population and is used to estimate the average monthly population (AMP) for the year.

2014	70	28	40%	42	60%	67	23	34%	44	66%	
2015	57	20	35%	37	65%	55	23	43%	31	57%	
2016	45	15	33%	30	67%	44	22	49%	23	51%	
2017	46	17	37%	29	63%	46	22	48%	24	52%	
2018	46	21	45%	26	55%	45	19	41%	27	59%	
2019	44	28	64%	16	36%	43	15	36%	27	64%	

Note. Average Daily Population (ADP) is calculated by taking a count of the number of juveniles in custody at 0600 hours each day of the month, adding these daily counts together, and dividing the sum by the number of days in each month. A one-day snapshot is the number of juveniles in custody at 0600 hours on the 15th day of the month. For the misdemeanor and felony populations the one-day snapshot each month provides an estimate of the monthly population and is used to estimate the average monthly population (AMP) for the year.

2019	58	32	55%	26	45%	59	25	42%	34	58%

Note. Average Daily Population (ADP) is calculated by taking a count of the number of juveniles in custody at 0600 hours each day of the month, adding these daily counts together, and dividing the sum by the number of days in each month. A one-day snapshot is the number of juveniles in custody at 0600 hours on the 15th day of the month. For the misdemeanor and felony populations the one-day snapshot each month provides an estimate of the monthly population and is used to estimate the average monthly population (AMP) for the year.

Note. Santa Barbara's Juvenile Hall converted to a Special Purpose Juvenile Hall in October 2011. A Special Purpose Juvenile Hall is a county facility used for temporary confinement of youth, not to exceed 96 hours, prior to transfer to a full service juvenile facility or release. Average Daily Population (ADP) is calculated by taking a count of the number of juveniles in custody at 0600 hours each day of the month, adding these daily counts together, and dividing the sum by the number of days in each month. A one-day snapshot is the number of juveniles in custody at 0600 hours on the 15th day of the month. For the misdemeanor and felony populations the one-day snapshot each month provides an estimate of the monthly population and is used to estimate the average monthly population (AMP) for the year.

Note. Average Daily Population (ADP) is calculated by taking a count of the number of juveniles in custody at 0600 hours each day of the month, adding these daily counts together, and dividing the sum by the number of days in each month. A one-day snapshot is the number of juveniles in custody at 0600 hours on the 15th day of the month. For the misdemeanor and felony populations the one-day snapshot each month provides an estimate of the monthly population and is used to estimate the average monthly population (AMP) for the year.

Note. Siskiyou's Juvenile Hall converted to a Special Purpose Juvenile Hall in February 2018. A Special Purpose Juvenile Hall is a county facility used for temporary confinement of youth, not to exceed 96 hours, prior to transfer to a full service juvenile facility or release. Average Daily Population (ADP) is calculated by taking a count of the number of juveniles in custody at 0600 hours each day of the month, adding these daily counts together, and dividing the sum by the number of days in each month. A one-day snapshot is the number of juveniles in custody at 0600 hours on the 15th day of the month. For the misdemeanor and felony populations the one-day snapshot each month provides an estimate of the monthly population and is used to estimate the average monthly population (AMP) for the year.

2019		5	100%	5	0	7%	5	93%		

Note. Average Daily Population (ADP) is calculated by taking a count of the number of juveniles in custody at 0600 hours each day of the month, adding these daily counts together, and dividing the sum by the number of days in each month. A one-day snapshot is the number of juveniles in custody at 0600 hours on the 15th day of the month. For the misdemeanor and felony populations the one-day snapshot each month provides an estimate of the monthly population and is used to estimate the average monthly population (AMP) for the year.

Note. Average Daily Population (ADP) is calculated by taking a count of the number of juveniles in custody at 0600 hours each day of the month, adding these daily counts together, and dividing the sum by the number of days in each month. A one-day snapshot is the number of juveniles in custody at 0600 hours on the 15th day of the month. For the misdemeanor and felony populations the one-day snapshot each month provides an estimate of the monthly population and is used to estimate the average monthly population (AMP) for the year.

Note. Trinity's Juvenile Hall converted to a Special Purpose Juvenile Hall in August 2014. A Special Purpose Juvenile Hall is a county facility used for temporary confinement of youth, not to exceed 96 hours, prior to transfer to a full service juvenile facility or release. Average Daily Population (ADP) is calculated by taking a count of the number of juveniles in custody at 0600 hours each day of the month, adding these daily counts together, and dividing the sum by the number of days in each month. A one-day snapshot is the number of juveniles in custody at 0600 hours on the 15th day of the month. For the misdemeanor and felony populations the one-day snapshot each month provides an estimate of the monthly population and is used to estimate the average monthly population (AMP) for the year.

Note. Average Daily Population (ADP) is calculated by taking a count of the number of juveniles in custody at 0600 hours each day of the month, adding these daily counts together, and dividing the sum by the number of days in each month. A one-day snapshot is the number of juveniles in custody at 0600 hours on the 15th day of the month. For the misdemeanor and felony populations the one-day snapshot each month provides an estimate of the monthly population and is used to estimate the average monthly population (AMP) for the year.

Note. ² Yuba County & Sutter County share a regional Juvenile Hall. The Juvenile Hall is located in Yuba County. Average Daily Population (ADP) is calculated by taking a count of the number of juveniles in custody at 0600 hours each day of the month, adding these daily counts together, and dividing the sum by the number of days in each month. A one-day snapshot is the number of juveniles in custody at 0600 hours on the 15th day of the month. For the misdemeanor and felony populations the one-day snapshot each month provides an estimate of the monthly population and is used to estimate the average monthly population (AMP) for the year.
